# Introduction

## 1 History of bowed strings

In static bow-string-interaction models, the friction force is defined as a function of the relative velocity between the bow and the string only. The first mathematical description of friction was proposed by Coulomb in 1773 [?] to which static friction, or *stiction*, was added by Morin in 1833 [?] and viscous friction, or velocity-dependent friction, by Reynolds in 1886 [?]. In 1902, Stribeck found a smooth transition between the static and the coulomb part of the friction curve now referred to as the Stribeck effect [?]. The latter is still the standard for static friction models today.

## 2 Section 2 name

Here is section 2. If you want to leearn more about  $\text{\LaTeX}2_{\epsilon}$ , have a look at [1], [3] and [2].

I think this word is misspelled

### 2.1 Examples

You can also have examples in your document such as in example 2.1.

### Example 2.1 (An Example of an Example)

Here is an example with some math

$$0 = \exp(i\pi) + 1 . \quad (1)$$

You can adjust the colour and the line width in the `macros.tex` file.

## 2.2 How does Subsections and Subsubsections Look?

Well, like this

### This is a Subsubsection

and this.

**A Paragraph** You can also use paragraph titles which look like this.

**A Subparagraph** Moreover, you can also use subparagraph titles which look like this. They have a small indentation as opposed to the paragraph titles.

Is it possible to add a subsub-paragraph?

I think that a summary of this exciting chapter should be added.

## 3 Conclusion

In case you have questions, comments, suggestions or have found a bug, please do not hesitate to contact me. You can find my contact details below.
